

DUAL CURE DENTAL ADHESIVE SYSTEM

PANAVIA™ F 2.0

Tips & Cautions

- Mixed PANAVIA F 2.0 paste will not set up on the pad.
- Do not use hemostatic agent containing ferric sulfate.
- PANAVIA F 2.0 Opaque shade can not be light cured ; chemical cures.
- PANAVIA F 2.0 can be cured using any type of curing light (Halogen, LED and Plasma arc light).
- For easy clean up, excess cement around the margin may be light cured partially for 2 to 3 sec, (Using conventional halogen or LED light) then remove excess.
- Step by step illustrations for silanating porcelain (Please refer to the back).

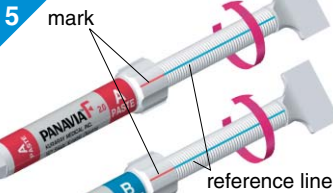

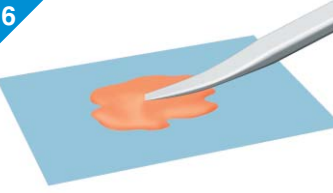

Flow Chart Sheet

Silane coupling treatment procedure

Cementation of precious & semi-precious metal crowns, PFM crowns, bridges, inlays and onlays.

<p>1</p> 	<p>2</p> 	<p>3</p> 
<p>Sandblast, wash & dry.</p>	<p>Apply ALLOY PRIMER to internal surface of precious metal restoration.</p>	<p>Mix equal amounts of ED PRIMER II A&B. Apply to the tooth. Then, wait 30 sec. *ED PRIMER II initiates set of cement.</p>
<p>4</p> 	<p>5</p> 	<p>6</p> 
<p>Gently air dry.</p>	<p>Dispense equal amounts of paste A&B.</p>	<p>Mix paste A&B for 20 sec.</p>

Cementation of precious & semi-precious metal crowns, PFM crowns, bridges, inlays and onlays.

Cementation of precious & semi-precious metal crowns, PFM crowns, bridges, inlays and onlays.

Light cure the margins.
 20sec. per surface
 (Conventional halogen or LED light)
 5sec. per surface
 (Plasma arc or fast halogen light)

OR

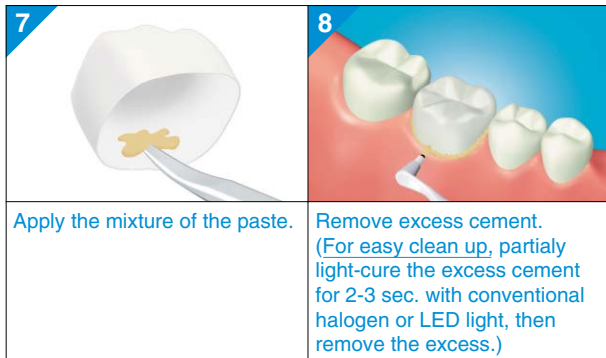

Self cure material by applying
 OXYGUARD II to the margins. Then,
 wait 3 min.

Cementation of silanated porcelain/composite restorations

<p>1</p> 	<p>2</p>  <p>5 s H₂O ↓ Air</p>	<p>3</p> 
<p>Sandblasting.</p>	<p>Apply K ETCHANT GEL (40% phosphoric acid) to clean surface for 5 sec. Rinse and dry.</p>	<p>Mix equal amounts of CLEARFIL SE BOND or LINER BOND 2V Primers with PORCELAIN BOND ACTIVATOR (Silane). Apply mixture and air dry.</p>
<p>4</p>  <p>30 s</p>	<p>5</p>  <p>H₂O</p>	<p>6</p>  <p>mark reference line</p>
<p>Mix equal amounts of ED PRIMER II A&B. Apply to the tooth. Then, wait 30 sec. *ED PRIMER II initiates set of cement</p>	<p>Gently air dry.</p>	<p>Dispense equal amounts of paste A&B. Mix paste A&B for 20 sec. minimum.</p>

Cementation of silanated porcelain/composite restorations

Light cure the margins.
 20sec. per surface
 (Conventional halogen or LED light)
 5sec. per surface
 (Plasma arc or fast halogen light)

OR

Self cure material by applying
OXYGUARD II to the margins. Then,
 wait 3 min.

Cementation of ceramic oxide restorations: PROCERA™, IN-CERAM™, CERCON™ and other zirconia prostheses.

<p>1 Mix equal amounts of ED PRIMER II A&B and apply to the tooth. Then, wait 30 sec. *ED PRIMER II initiates set of cement.</p>	<p>2 Gently air dry.</p>	<p>3 Dispense equal amounts of paste A&B.</p>

<p>4 Mix paste A&B for 20 sec.</p>	<p>5 Apply the mixture of the paste to the sandblasted crown.</p>

Cementation of ceramic oxide restorations: PROCERA™, IN-CERAM™, CERCON™ and other zirconia prostheses.

Remove excess cement.
 (For easy clean up, partially light-cure the excess cement for 2-3 sec. with conventional halogen or LED light, then remove the excess.)

Light cure the margins.
 20sec. per surface
 (Conventional halogen or LED light)
 5sec. per surface
 (Plasma arc or fast halogen light)

OR

Self cure material by applying
 OXYGUARD II to the margins. Then,
 wait 3 min.

Cementation of porcelain veneers

<p>1</p> 	<p>2</p> 	<p>3</p> 
<p>Hydrofluoric acid etch the veneer. If veneer is pre-etched by laboratory go to step 2.</p>	<p>Apply K ETCHANT GEL (40% phosphoric acid) to clean the internal surface for 5 sec.</p>	<p>Mix equal amounts of CLEARFIL SE BOND or LINER BOND 2V Primers with PORCELAIN BOND ACTIVATOR (Silane). Apply mixture and air dry.</p>
<p>4</p> 	<p>5</p> 	<p>6</p> 
<p>Apply K ETCHANT GEL (40% phosphoric acid) to the enamel surface for 10 sec. Rinse and gently air dry.</p>	<p>Mix equal amounts of ED PRIMER II A&B. Apply to the tooth. Then, wait for 30sec. *ED PRIMER II initiates set of cement</p>	<p>Gently air dry.</p>

Cementation of porcelain veneers

<p>7</p> 	<p>8</p> 	<p>9</p> 
<p>Dispense equal amounts of paste A&B. Mix for 20 sec. minimum.</p>	<p>Apply mixture of the paste directly to silane.</p>	<p>Remove excess cement. (For easy clean up, partially light-cure the excess cement for 2-3 sec. with conventional halogen or LED light, then remove the excess.)</p>

10-a

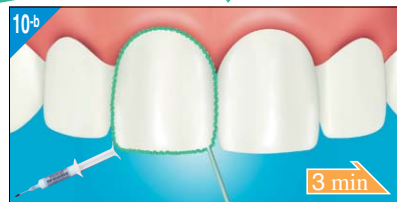

Conventional halogen, LED **20 s**
 Plasma arc, fast halogen **5 s**

Light cure the margins.
 20sec. per surface
 (Conventional halogen or LED light)
 5sec. per surface
 (Plasma arc or fast halogen light)

OR

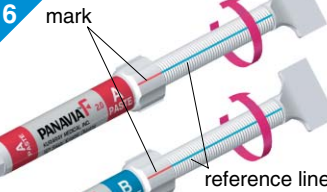

10-b

3 min

Self cure material by applying OXYGUARD II to the margins.
 Then, wait 3 min.

Cementation of precious restorations (Adhesion bridges/Maryland bridges)

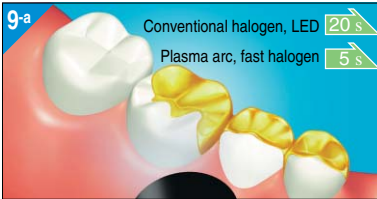

<p>1</p> 	<p>2</p> 	<p>3</p>  <p>10 s H₂O ↓ Air</p>
<p>Sandblast, wash&dry.</p>	<p>Apply ALLOY PRIMER to internal surface of precious metal restoration.</p>	<p>Apply K ETCHANT GEL (40% phosphoric acid) to the tooth for 10 sec. Rinse and dry.</p>
<p>4</p>  <p>30 s</p>	<p>5</p>  <p>H₂O</p>	<p>6</p>  <p>mark reference line</p>
<p>Mix equal amounts of ED PRIMER II A&B. Apply to the tooth. Then, wait 30 sec. *ED PRIMER II initiates set of cement.</p>	<p>Gently air dry.</p>	<p>Dispense equal amounts of paste A&B.</p>

Cementation of precious restorations (Adhesion bridges/Maryland bridges)

		
<p>Mix paste A&B for 20 sec.</p>	<p>Apply the mixture of the paste to sandblasted metal.</p>	<p>Remove excess cement. (For easy clean up, partially light-cure the excess cement for 2-3 sec. with conventional halogen or LED light, then remove the excess.)</p>

9-a

Conventional halogen, LED **20 s**
 Plasma arc, fast halogen **5 s**

Light cure the margins.
 20sec. per surface
 (Conventional halogen or LED light)
 5sec. per surface
 (Plasma arc or fast halogen light)

OR

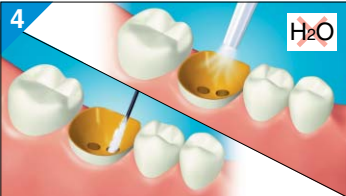

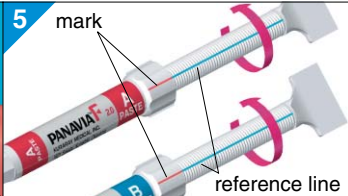

9-b

3 min

Self cure material by applying OXYGUARD II to the margins. Then, wait 3 min.

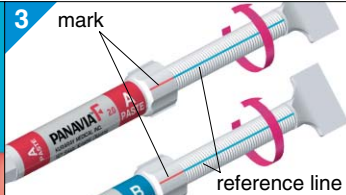

Cementation of cores or prefabricated posts.

<p>1</p> 	<p>2</p> 	<p>3</p> 
<p>Sandblasting.</p>	<p>If the post is precious metal, apply ALLOY PRIMER, air dry.</p>	<p>Mix equal amounts of ED PRIMER II A&B. Apply to coronal and post-hole tooth structure. Then, wait 30 sec. *ED PRIMER II initiates set of cement.</p>
<p>4</p> 	<p>5</p> 	<p>6</p> 
<p>Gentle air dry. Remove excess primer with paper points.</p>	<p>Dispense equal amounts of paste A&B.</p>	<p>Mix paste A&B and coat posts with mixed cement.</p>

Cementation of cores or prefabricated posts.

 <p>7</p> <p>An illustration showing a prefabricated white post being seated into a prepared tooth. The post is partially inserted into the root canal, and a layer of white cement is visible around the base of the post within the preparation.</p>	 <p>8</p> <p>An illustration showing a white composite build-up core placed on top of the seated post. The composite is a rectangular block that fits snugly against the post and the surrounding tooth structure.</p>
<p>Seat posts and apply excess cement to coronal tooth structure.</p>	<p>Place build-up composite directly on PANAVIA F 2.0, light or self-cure.</p>

Amalgam bonding

<p>1</p> 	<p>2</p> 	<p>3</p> 
<p>Mix equal amounts of ED PRIMER II A&B. Apply to the tooth. Then, wait 30 sec. *ED PRIMER II initiates set of cement</p>	<p>Gently air dry.</p>	<p>Dispense equal amounts of paste A&B. Mix paste A&B for 20 sec. minimum.</p>
<p>4</p> 	<p>5</p> 	<p>6</p> 
<p>Apply mixture of paste to the base of the preparation.</p>	<p>Mix and place the amalgam.</p>	<p>Complete the carving and remove the matrix band.</p>

Amalgam bonding

Remove excess cement.
 (For easy clean up, partially light-cure the excess cement for 2-3 sec. with conventional halogen or LED light, then remove the excess.)

Conventional halogen, LED 20 s
 Plasma arc, fast halogen 5 s

Light cure the margins.
 20sec. per surface
 (Conventional halogen or LED light)
 5sec. per surface
 (Plasma arc or fast halogen light)

OR

Self cure material by applying OXYGUARD II to the margins. Then, wait 3 min.

Complete the polishing.
